

FOREWORD	vi
INTRODUCTION TO THE SECOND EDITION	ix
AUTHOR'S PREFACE	xiv
ACKNOWLEDGMENTS	xviii

Part one *A first view*

CHAPTER 1 THE NATURE OF SCIENCE	2
1.1 The scientific process	4
1.2 Domains of magnitude	7
1.3 Theories and models in science	8
1.4 Definitions	14
1.5 Length, time, and mass	17
Summary	21
List of new terms	21
Problems	22
Bibliography	25
CHAPTER 2 REFERENCE FRAMES	30
2.1 Relative position	31
2.2 Relative motion	38
2.3 Displacement	45
Summary	50
List of new terms	50
List of symbols	50
Problems	50
Bibliography	52
CHAPTER 3 THE INTERACTION CONCEPT	54
3.1 Evidence of interaction	55
3.2 Historic background	56
3.3 Systems	57
3.4 Collecting evidence of interaction	60
3.5 Interaction-at-a-distance	67
Summary	76
List of new terms	76
Problems	76
Bibliography	79
CHAPTER 4 MATTER AND ENERGY	80
4.1 Conservation of energy	81
4.2 Systems and subsystems	84
4.3 Passive coupling elements	85

4.4	Forms of energy storage	88
4.5	The many-interacting-particles (MIP) model for matter	89
4.6	Equilibrium and steady states	95
4.7	The feedback loop model	99
4.8	Efficiency of energy transfer	99
	Summary	103
	List of new terms	104
	Problems	104
	Bibliography	107

Part two *Waves and atoms*

CHAPTER 5	MODELS FOR LIGHT AND SOUND	110
5.1	Properties of light and sound	111
5.2	The ray model for light	116
5.3	Application of the ray model to lenses	126
	Summary	134
	List of new terms	134
	List of symbols	134
	Problems	134
	Bibliography	137
CHAPTER 6	THE WAVE THEORY	138
6.1	The description of wave trains and pulses	140
6.2	Superposition and interference of waves	145
6.3	Huygens' principle	153
6.4	Diffraction of waves	156
6.5	Reflection of waves	160
6.6	Refraction of waves	162
	Summary	167
	List of new terms	168
	List of symbols	168
	Problems	168
	Bibliography	170
CHAPTER 7	WAVE MODELS FOR SOUND AND LIGHT	172
7.1	Applications of wave theory to sound	173
7.2	Application of the wave model to light	179
7.3	The electromagnetic theory of light	192
	Summary	196
	List of new terms	197
	List of symbols	197
	Problems	197
	Bibliography	200

CHAPTER 8 MODELS FOR ATOMS	202
8.1 The electrical nature of matter	203
8.2 Early models for atoms	208
8.3 Bohr's model for the atom	212
8.4 The wave mechanical atom	215
8.5 Wave-particle duality and the uncertainty principle	217
8.6 The atomic nucleus	220
Summary	227
List of new terms	228
List of symbols	229
Problems	229
Bibliography	230

Part three Energy

CHAPTER 9 OPERATIONAL DEFINITIONS OF ENERGY	234
9.1 Measurement of energy	235
9.2 Energy scales	237
9.3 The definitions of energy	241
9.4 Comparison of the joule and the Calorie	243
Summary	244
List of new terms	245
List of symbols	245
Problems	245
CHAPTER 10 TEMPERATURE AND ENERGY	248
10.1 Operational definition of temperature	249
10.2 Thermal energy and specific heat	254
10.3 Energy accompanying phase change	260
10.4 Chemical energy release	265
10.5 Thermal energy and the MIP model for matter	266
Summary	269
Additional examples	270
List of new terms	272
List of symbols	272
Problems	272
Bibliography	276
CHAPTER 11 FORCE, DISPLACEMENT, AND ENERGY TRANSFER	278
11.1 Factors in energy transfer	279
11.2 Interaction and force	280
11.3 The gravitational force	288
11.4 Work	291
11.5 Electrical force and energy	295
11.6 Elastic energy and elastic force	296

11.7	Elastic energy and the MIP model for matter	299
11.8	Frictional force	302
	Summary	305
	List of new terms	305
	List of symbols	306
	Problems	306
	Bibliography	309
CHAPTER 12 ELECTRIC CURRENT AND ENERGY TRANSFER		310
12.1	Electric current	311
12.2	Voltage	320
12.3	Analysis of simple circuits	327
12.4	Energy transfer	331
	Summary	337
	Additional examples	337
	List of new terms	339
	List of symbols	339
	Problems	339
	Bibliography	345
<i>Part four Motion</i>		
CHAPTER 13 OBJECTS IN MOTION		348
13.1	Velocity	349
13.2	Acceleration	356
13.3	Momentum	359
	Summary	360
	List of new terms	360
	List of symbols	360
	Problems	360
	Bibliography	362
CHAPTER 14 NEWTON'S LAWS OF MOTION		364
14.1	Background	365
14.2	Newton's first law of motion	368
14.3	Newton's second law of motion	372
14.4	Motion near the surface of the earth	380
14.5	Newton's third law of motion	386
14.6	Kinetic energy	388
	Summary	391
	Additional examples	392
	List of new terms	394

<i>Contents</i>	<i>xxix</i>
List of symbols	394
Problems	394
Bibliography	399
CHAPTER 15 PERIODIC MOTION	400
15.1 Properties of periodic motion	401
15.2 A mathematical model for circular motion	402
15.3 The solar system and gravitation	404
15.4 The pendulum	411
15.5 Elastic oscillators	415
Summary	416
Additional examples	416
List of new terms	419
List of symbols	420
Problems	420
Bibliography	422
CHAPTER 16 HEAT AND MOTION	424
16.1 Properties of gases	426
16.2 Gas pressure	428
16.3 Energy storage by gases	434
16.4 Heat engines and refrigerators	444
16.5 The kinetic theory of gases	449
Summary	454
List of new terms	455
List of symbols	455
Problems	455
Bibliography	459
EPILOGUE “SCIENCE IN THE NEW HUMANISM” BY JACOB BRONOWSKI	460
APPENDIX MATHEMATICAL BACKGROUND	466
A•1 Arithmetic for physics	467
A•2 Mathematical models	472
A•3 Geometry and trigonometry	477
ANSWERS TO PROBLEMS WITH NUMERICAL SOLUTIONS	484
INDEX	488
ROBERT KARPLUS – A PORTRAIT BY FERNAND BRUNSCHWIG	498
HISTORICAL TIMELINE	508
